

Pieces
The Jigsaw Puzzle Game

Pieces is a puzzle game and a single-player challenge that uses 108 traditional jigsaw puzzle pieces. They are made up of only 18 different repeated shapes. What makes it so unique is that each puzzle piece can interlock with any of the other pieces. What makes it a challenge is finding the right combination of pieces to solve the various puzzles that come in different sizes, colors, and patterns.

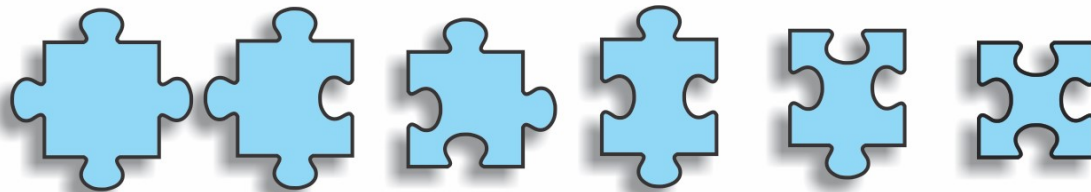

4 Corners

8 Edges

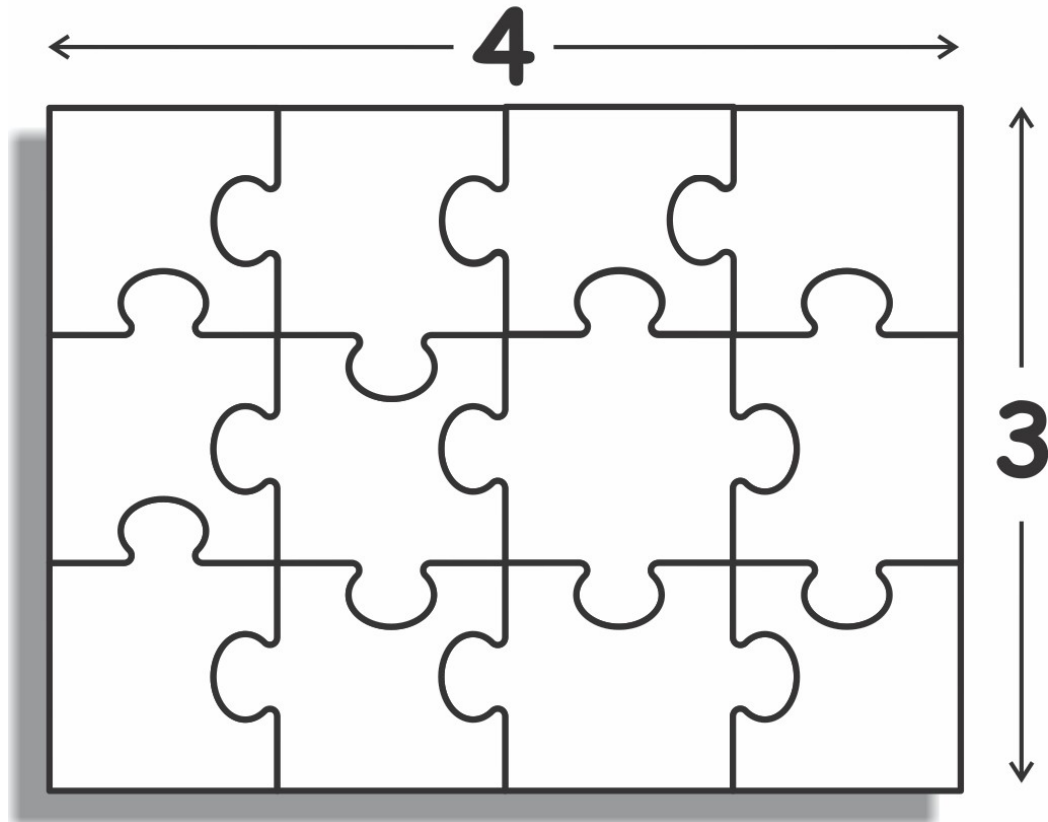

6 Middles

When played as a single-player challenge, you first select one of the many designs or one of the 80 grids. Start with a smaller grid that uses only the white side of the pieces and work your way up to the largest 8X13 grid.

4X3 Sample Grid

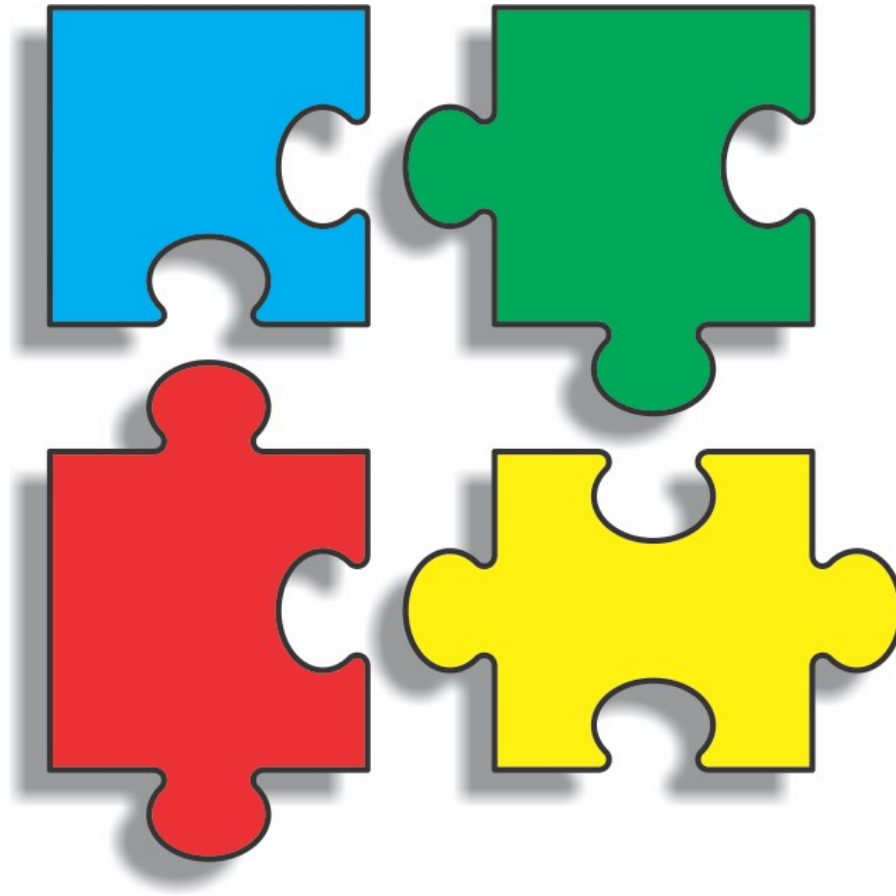

When playing with two players, a pile of pieces is placed between the players who then race to create their own grid first. Because there are only 108 pieces available, the maximum grid that can be completed by both players is 7X7.

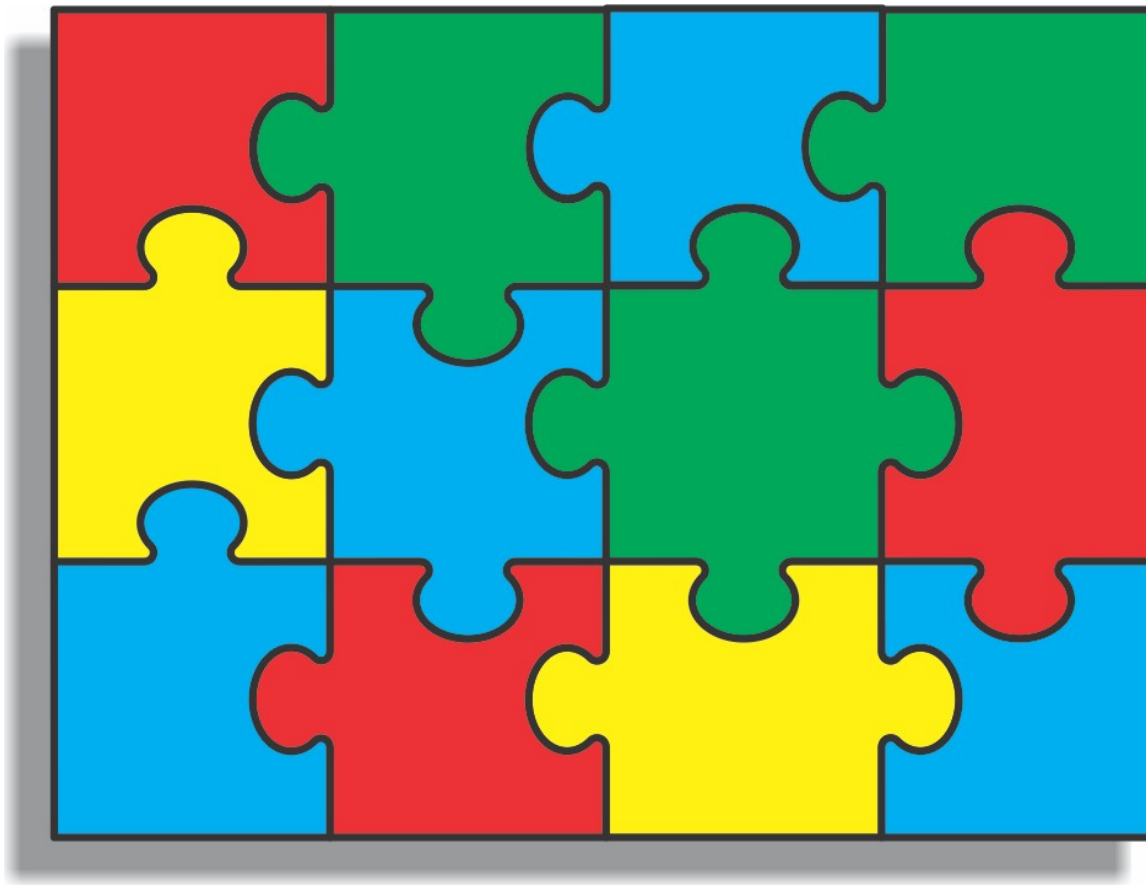

Two Player Grid Sizes

3X3, 3X4, 3X5, 3X6, 3X7, 3X8, 3X9, 3X10, 3X11
4X4, 4X5, 4X6, 4X7, 4X8, 4X9, 4X10
5X5, 5X6, 5X7, 5X8, 5X9
6X6, 6X7, 6X8
7X7

The pieces are two-sided, with one side white and the other side one of four colors; red, yellow, blue and green. Using the colored side adds an even greater challenge to the play.

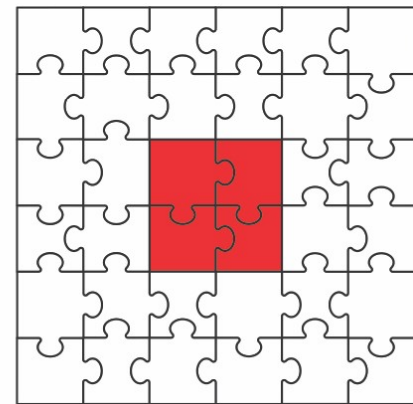

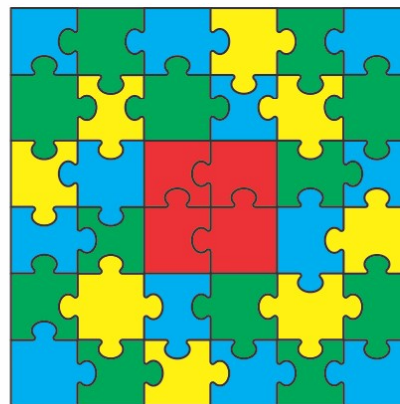

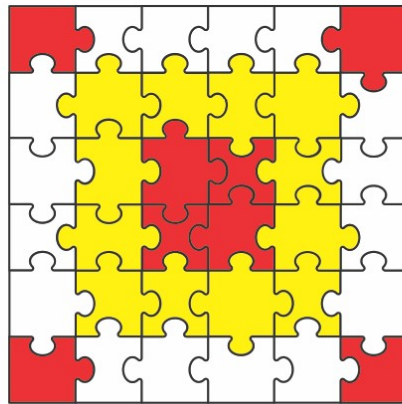

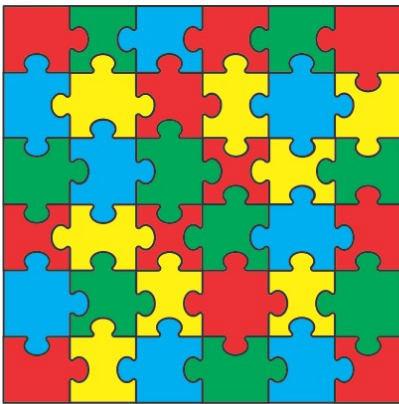

To start, you can create a smaller grid with colored pieces so that no two pieces of the same color are next to each other.

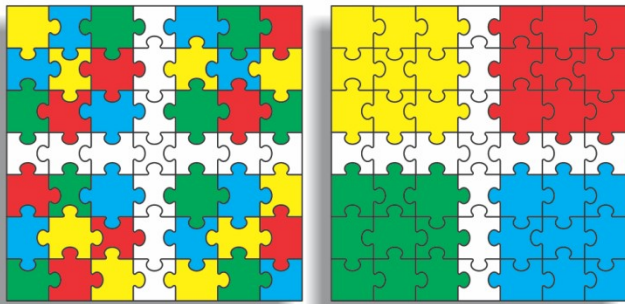

Try completing a larger grid puzzle using both the white side and colored side of the pieces.

Some 6X6 grid patterns

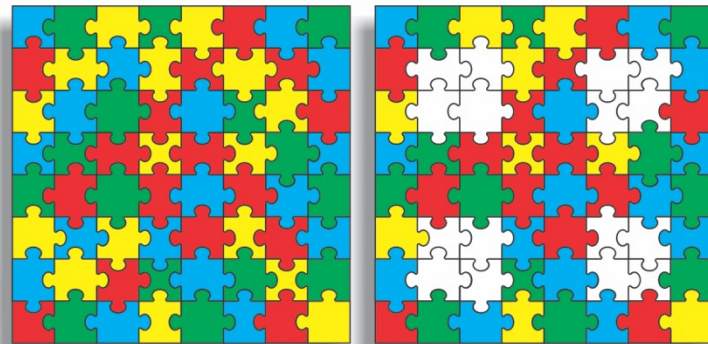

Because there is no one right way to complete a puzzle, the combinations are endless. You can create your own designs.

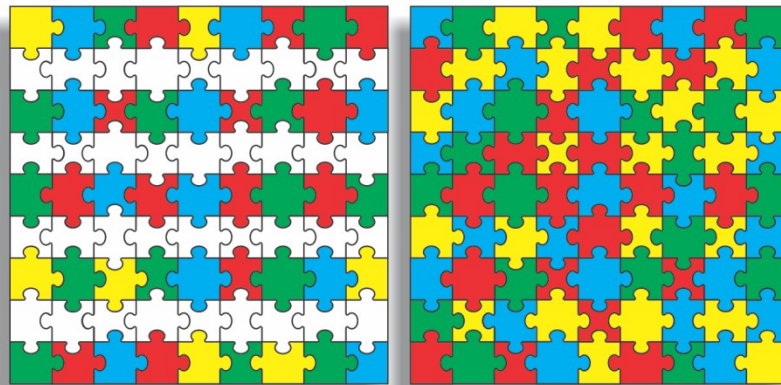

7X7

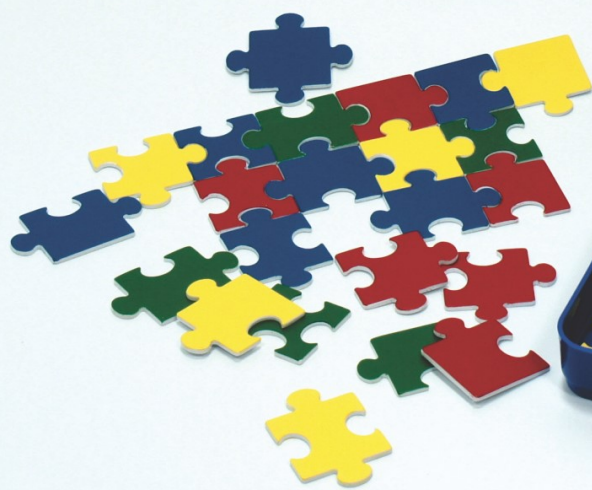

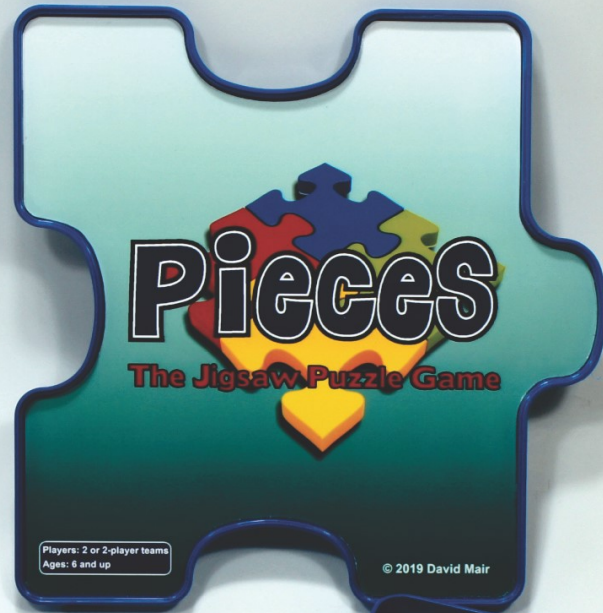

8X8

9X9
